

ELECTRIC VEHICLE CONVERSION LECTURE & DEMO

- ★ Could your car be converted to run on batteries instead of gas?
- ★ Would it provide the speed and range you need?
- ★ How hard is it to convert?
- ★ What does it cost to convert and operate an electric car?

These questions and others will be answered during a one-day workshop held on **October 6th** on the **Cal Poly campus**.

The early portion of the talk will cover general information about conversions - cost, performance, environmental issues, etc.

Then speaker Mike Brown of Electro Automotive will get into the nuts and bolts, from choosing a suitable chassis, stripping it, installing the components and wiring, to charging, maintenance, and driving techniques. A factory electric Toyota RAV4 and a converted Fiat X1/9 will be on hand as demo vehicles. This event is free and open to the public but registration is required.

For more information, visit www.c-5.org or contact Alex at 805.781.4654 abugrov@co.slo.ca.us
